PROJECTS

CI/CD DevSecOps Pipeline with GitOps Deployment (Tetris Application)

Tools: Jenkins, SonarQube, OWASP Dependency Check, Trivy, Docker, Kubernetes (EKS), Terraform, ArgoCD, Prometheus, Grafana

- Engineered an end-to-end CI/CD DevSecOps pipeline using Jenkins, automating build, test, and deployment workflows, reducing manual effort by ~60%.
- Integrated SonarQube, OWASP Dependency-Check, and Trivy for shift-left security, identifying 20%+ vulnerabilities before production.
- Provisioned AWS EKS using Terraform (IaC) and implemented Argo CD GitOps, enabling ~40% faster deployments with automated rollback and real-time monitoring via Prometheus and Grafana.

Three-Tier Architecture Deployment using Terraform (AWS)

Tools: Terraform, VS Code, AWS VPC, EC2, ALB, RDS, IAM, S3, CloudWatch

- Developed a scalable three-tier AWS architecture using modular Terraform IaC, reducing infrastructure provisioning time by ~65%.
- Established secure VPC networking with public/private subnets, NAT Gateway, and security groups enforcing least-privilege access, improving security by ~30%.
- Implemented EC2 application layer behind ALB with multi-AZ RDS database, achieving ~99.9% availability with CloudWatch monitoring and alerts.

Dockerized Web Application Deployment on AWS ECS Fargate

Tools: Docker, GitHub, Amazon ECS, AWS ECR, Fargate, ALB, Route 53, CloudWatch, AWS EC2

- Containerized web application using Docker multi-stage builds and pushed images to Amazon ECR, reducing environment inconsistencies by ~50%.
- Deployed workloads on Amazon ECS (Fargate) with ALB integration, enabling ~40% faster scaling with serverless container management.
- Configured Route 53 DNS routing, ECS auto-scaling, and CloudWatch logging, improving application reliability and monitoring.
